

# Cylenian: U+EC00 – U+EC2F

*Proposal by Danae Dekker, 2020-03-02*

The Cylenian alphabet is used to write the Insular Cylenian language, a language that is one of the five major languages in the country Cylene. Insular Cylenian is the only tongue in the Cylenian language family that is still written in this script; others including Tragonian Cylenian are nowadays written in the Latin script. Cylene is situated in the Northern Atlantic Ocean on an alternative earth in the [Atlantis project](#), an online forum for interactive geofiction.

The script derives from the Syrrin script, that according to ancient history was invented around 100 BCE. Around 1650 a standardized and optimized version of the Syrrin script was used in printing press, which developed into the current Cylenian script.

## Proposed encoding

The Cylenian block is divided in to the following ranges:

U+EC00 -> U+EC1F	32	Cylenian letters
U+EC20 -> U+EC23	4	Cylenian punctuation marks
U+EC24 -> U+EC27	4	currently unassigned
U+EC28 -> U+EC2E	7	Cylenian numerals
U+EC2F -> U+EC2F	1	currently unassigned

The following characters are encoded in the Cylenian block:
